

## CONCEPT DESIGN

The refined playground design has been developed based on the feedback we received in Spring 2021. The playground will remain in its current location with an expanded variety of play elements arranged to minimize the impacts on existing trees.

Key elements include a climbing structure, swings, playhouse, in-ground trampoline and new surfacing for improved accessibility. The design also includes additional amenities such as new seating, bike racks and picnic tables. Natural elements such as logs and boulders will be incorporated along the playground edge. Construction of the new playground is anticipated to begin the spring of 2022.
